

SOFIMA FILTER is the brand for the UFI FILTERS spa Group that identifies filter solutions for the independent spare parts sector. Its goal is to supply filtration systems to the automotive market (automobiles, off-road vehicles, motorcycles, trucks) and the non-automotive market (farm machinery, marine motors, compressors, industrial and earthworking machines such as: lift trucks, construction machinery and mining equipment). The SOFIMA brand was introduced into the Group and launched in 1981 to strengthen the company's Aftermarket sector which has enjoyed ongoing growth since that time.

SOFIMA filters are manufactured using the same technological standard and know-how as were developed for the Original Equipment Market (OEM) under the UFI FILTERS brand: the knowledge and experience gained in original equipment have been transferred to the Aftermarket. **Driven by our heart!** - is the SOFIMA pay off. In fact it is the enthusiasm of our design team that has created a full range of filter systems designed according to the highest quality standards for total Customer satisfaction. Reliable and efficient service is the lifeblood that flows fast through our Aftermarket distribution channels.

SOFIMA FILTER meets the complex and diversified requirements of the independent spare parts network thanks to the values, organization and goals of the Group that it belongs to.
